- Request information for a Steam64_UID (Steam Persona)
- Request a download of the raw user database

Request information for a Steam64_UID (Steam Persona)

Method URL: **HTTP/GET** https://lb.drof.space/v1/query-by-steam-identity-single?steamUID_64=%YOUR_INPUT%

Authentication: None

Input Parameters:

1. **steamUID_64:** SteamID (64-bit format) of a valid persona on the steam platform.

Output:

You will receive an output in JSON format. It isn't encoded in any way. Just raw data.

Top-Level Response

Field	Type	Description
success	boolean	Indicates whether your request could be completed at all.
data	object OR null	If given persona is currently hosting an opted-in cheat lobby, then this field will contain information about it.
correlated_history	object OR null	Aggregated historical data for any matching coordinator_id/SteamID within our DB

Data

Field	Type	Description
coordinator_id	string	It's not really a coordinator ID, but rather just your SteamUID but formatted in SteamUID_32 + hexadecimal representation.

party_members_present	number	Contains the amount of active players currently participating within a shared lobby. Because LMAOBOX constantly broadcasts how many players are in their opted-in & shared lobbies, this field can give you clues about how successful individual players are with recruitment of cheating peers.
lobby_type	string	LMAOBOX users will select this in their cheat UI themselves. It can be: • Legit • Rage • Competitive • Mann vs Machine
player_region	string	A region estimate calculated by LMAOBOX themselves and submitted when sharing lobby.
player_name	string	Because ingame names can differ from your actual steam name, my tracker also exposes this field. LMAOBOX shares your player name with their lobby sharing backend when you decide to opt in.
steamid	string	
persona_name	string	
profile_url	string	
community_banned	bool	
vac_banned	bool	
vac_bans	number	
game_bans	number	
days_since_last_ban	number	
economy_ban	string	
first_seen	string	
last_seen	string	
total_seconds_seen	number	Can be inaccurate and not necessarily based on seconds (dont ask why :D)
is_currently_active	boolean	If this player was active broadcasting within < 2,5 minutes, this field will be set to true.

Request a download of the raw user database

Method URL: **HTTP/GET** **https://lb.drof.space/v1/frds**

Authentication: HTTP Parameter ('apiKey')

Input Parameters:

1. **API Key:** Used as an identity provider for Authenticating with our API (not LMAOBOX!)

Output:

You will receive an output in JSON format. It isn't encoded in any way. Just raw data.

Top-Level Response

You will receive an application/octet-stream file download directly.
